A message from our Product Managers for Tamlite Lighting USA

Tamlite has evolved exponentially over the past few years. With our recent rebranding, historical factory consolidations, and department expansions we were able to take a huge leap towards being the best lighting supplier for CES. Tamlite is committed to providing more than just great products and great value — We are also committed to providing great service and long-term support for our CES family.

With almost 20 years of combined lighting experience, we have lived and breathed the products within our offering since the start of our careers here at Tamlite. We have been lucky enough to have worked our way up through the In-House Manufacturing Division of Tamlite, which has given us invaluable insight and education regarding how we develop and manufacture products. This factory experience aids us in growing Tamlite to its maximum potential every day. Whether our product is built in our own manufacturing facility here in Florida, or whether it ships from one of our trusted suppliers — Tamlite has the product selection and quality to get the job done - right!

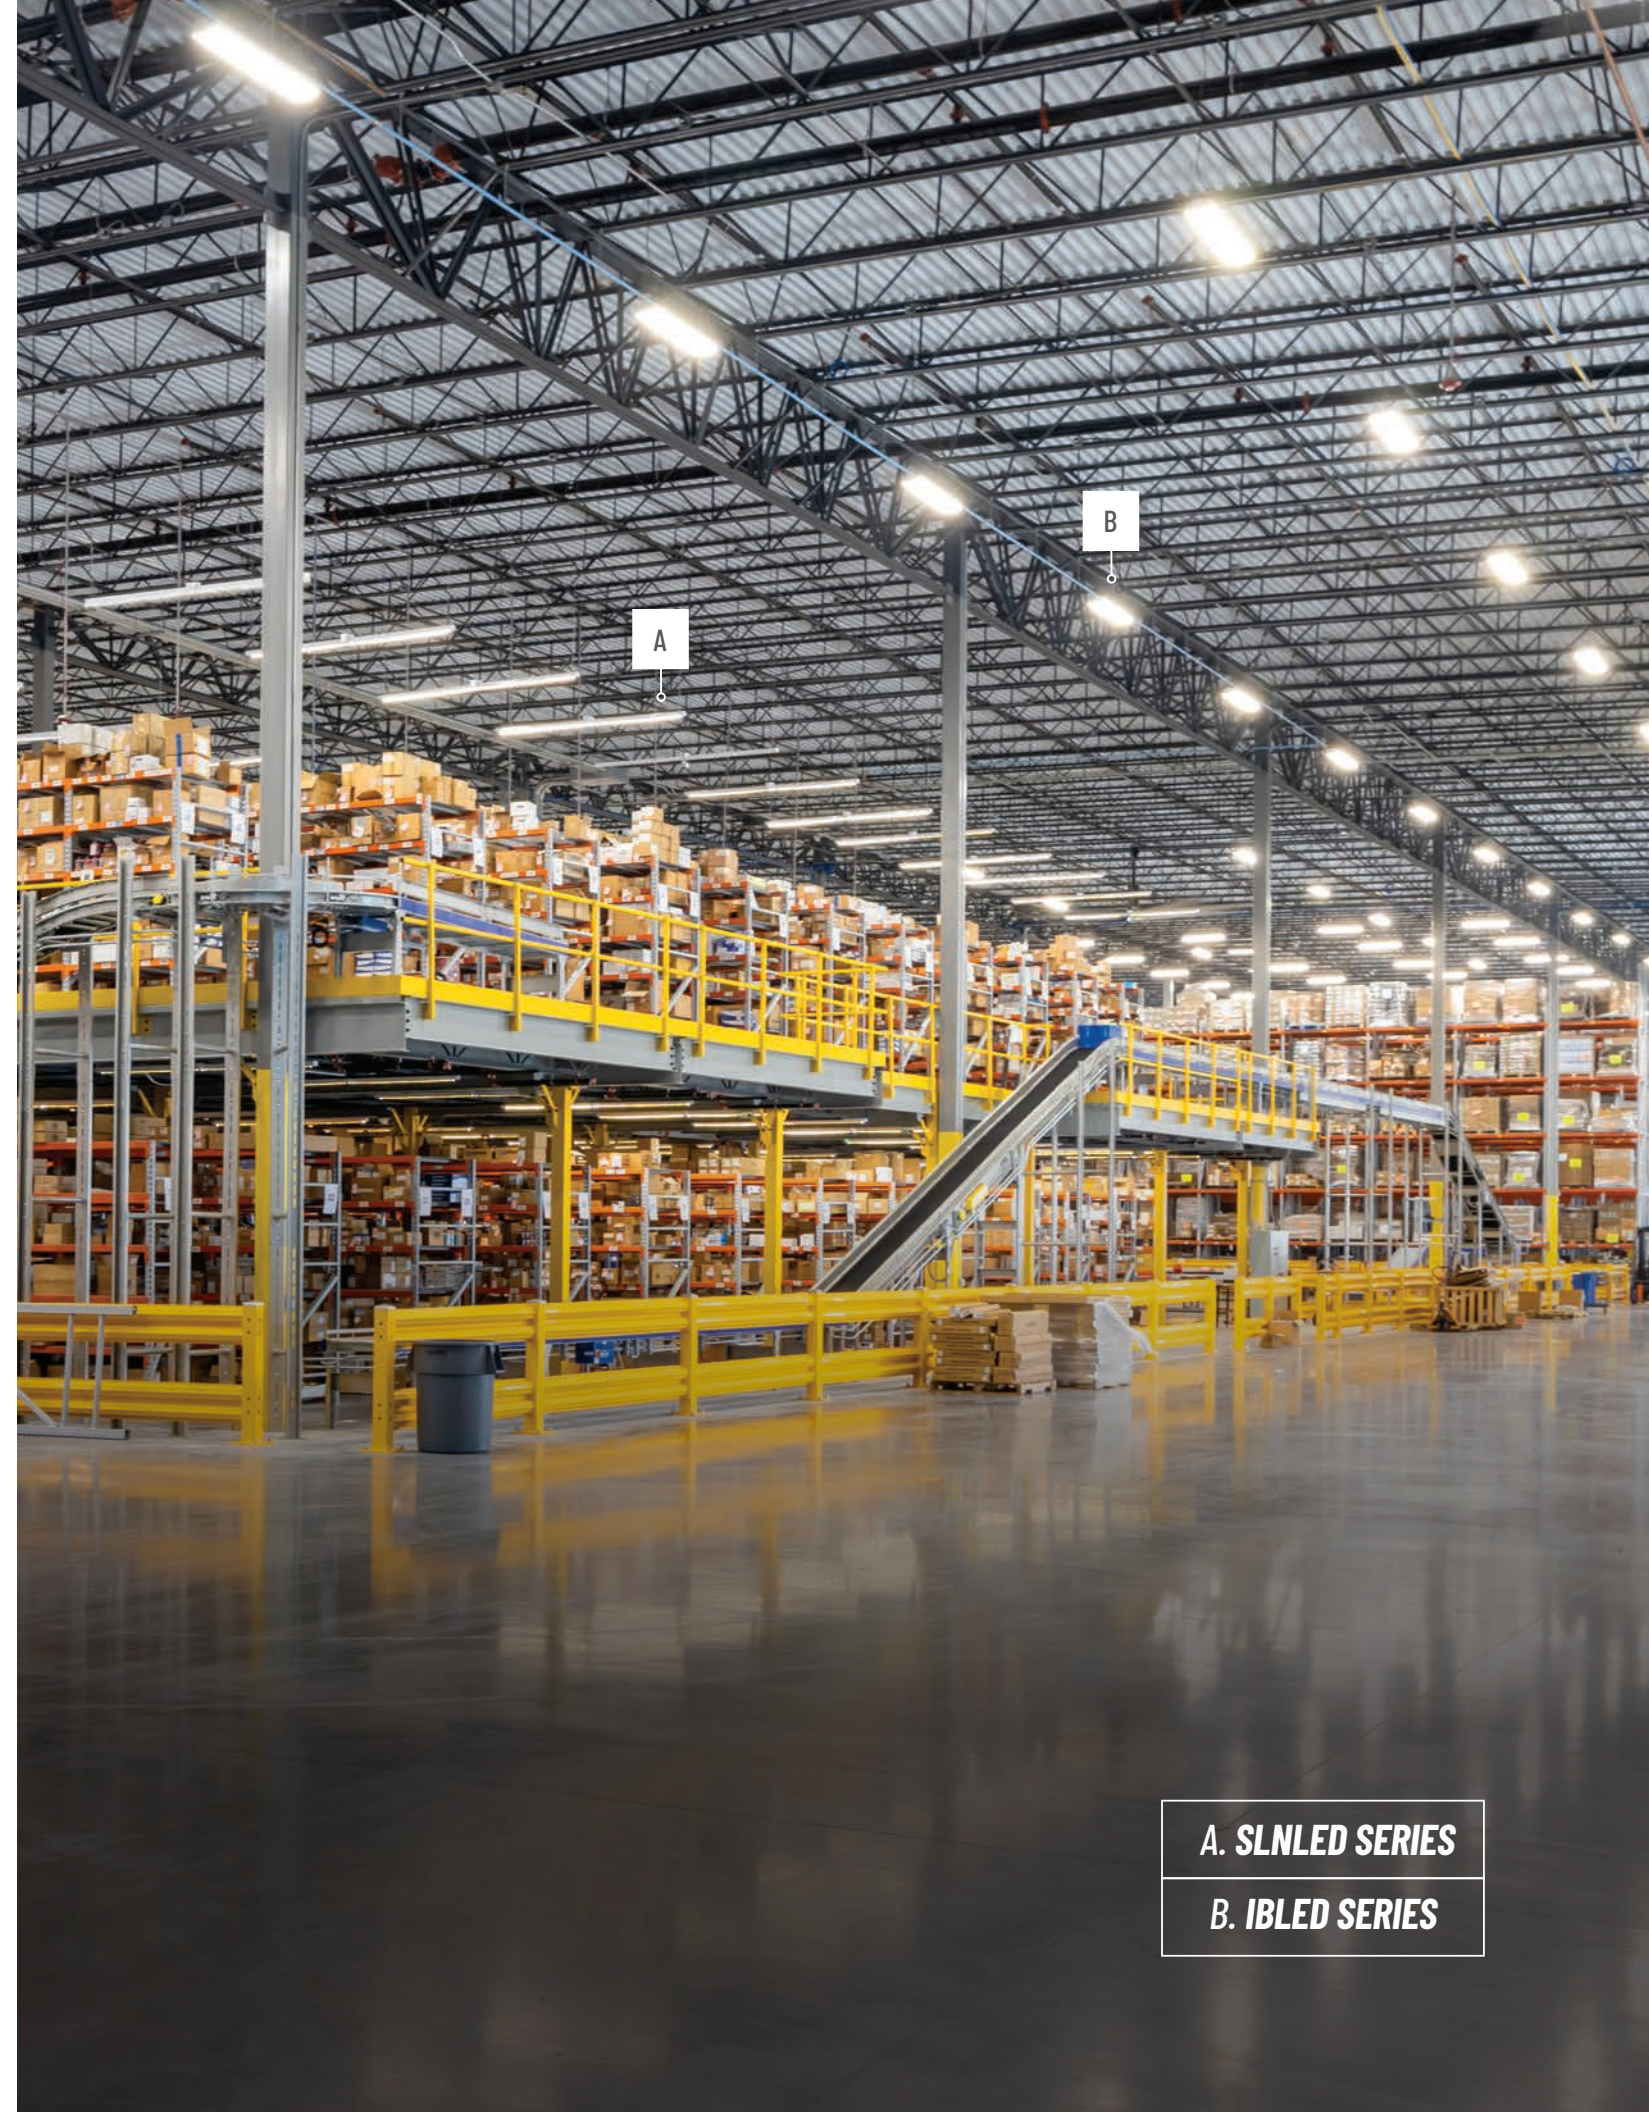

From smaller custom cut LED ribbon tape opportunities — to million-dollar lighting layouts — Our Tamlite Product Team, Manufacturing Team, Quotes, and Projects Departments are all prepared to assist you with any level of inquiry you may have.

This magazine will provide you with our current line card as of March 2022, as well as great information including specific sales flyers and some of our portfolio jobs. Thank you to all of our customers who have supported Tamlite over the years! We look forward to 2022 and beyond.

Sincerely,

James Bell
Shawn Cates

“DID YOU KNOW?”

MANUFACTURING

If you haven't seen the factory in the last 12 months, then you haven't seen the factory. As we've just passed the two-year mark of moving into the new building, we are firing on all cylinders on all fronts and the Production Department is no exception.

TAMCO's Production Department offers a unique in-house, American-made option, through multiple TAMCO brands, to several popular lines.

By leveraging in-house Engineering, and Quality Control departments, TAMCO's Production department manufactures quality lighting and electrical goods exclusively for City Electric Supply, ensuring you're never without options.

A few of the benefits to using your in-house manufacturing option:

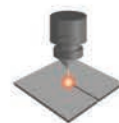

- With an average lead time of less than four business days for non-stocked items, you're able to service your customer's needs more quickly.
- TAMCO manufactures a broad lighting product range, complete with site-ready configurations to help give your customer exactly what they need.
- Your in-house brand of manufacturing maintains tight quality standards on raw materials – from LED drivers to coils of steel. Quality standards consist of 100% of LED boards and drivers being tested prior to shipment, and 100% of steel coils used in manufacturing come with a certification of conformity to ensure only quality goods make it to your branch.
- By purchasing TAMCO products manufactured by the Production team, you're supporting American jobs and doing your part to keep America's economy growing by supporting other local American-run businesses.

ASSEMBLED/MADE IN AMERICA

Tamlite Lighting is proud to continue its rich history of manufacturing and assembling many of its products in Port St. Lucie, Florida. These products meet the Made in the USA and Assembled in the USA designation as identified by the FTC.

HOR series

The HOR series full-body high bays are ideal for manufacturing, warehousing, commercial, and industrial facility lighting applications.

STVLED series

The STVLED Series is a slim volumetric direct/indirect troffer with a center light channel providing quality light with modern styling and high visual comfort.

SL series

With optional symmetrical and asymmetrical reflectors, the SL series strip light is suitable for general-purpose lighting in commercial, industrial, retail, cove, or warehouse applications. Narrow and wide options available.

CT series

With an IP67 rating and durable design, the CT series of fluorescent fixtures can be used in food-processing facilities or car washes. Suitable for wet environments.

WLS series

With a clean and shallow design, the WLS series wraparound is ideal for general illumination of areas such as hallways, corridors, and commercial and office buildings.

HORLED2 series

The HORLED2 series high bays are ideal for manufacturing, warehousing, commercial, and industrial facility lighting applications.

TC series

The TC series commercial troffer provides all of the benefits of an LED luminaire but with the look of a traditional fluorescent troffer. Designed for general illumination in commercial, industrial, and retail applications.

IBLED series

Minimalist design meets modern technology with the IBLED series LED high bay. The unique fanning of the LED board array creates an extra-wide light distribution.

2022 LINE CARD

At TamLite Lighting, we design, manufacture, and source an extensive range of lighting products suitable for a variety of applications, including retail, institutional, hospitality, residential, and industrial spaces. To see our full product offerings, check out our website - WWW.TAMLITEUSA.COM

SAVE TIME & MONEY

LED Tube ready fixtures are the perfect low-maintenance product for your contractors

Low Maintenance Fixtures

These fixtures offer the flexibility of having LED tubes pre-installed at the factory.* Plus, get the added convenience of replacing the tubes without having to replace the fixture.

*Ask factory for details.

LED PANELS HELP SHEET

BLP Series

This new LED back-lit panel brings a refreshing replacement to standard edge-lit panels. These back-lit units are lighter, brighter, and more efficient than standard edge-lits, while providing the same edge-to-edge light diffusion.

TLP Series

The TLP series edge-lit LED flat panels are a great energy saving long-life lighting solution. The low profile modern design makes it ideal for use in airport, retail, education, and commercial office buildings.

LED FRAME LIGHT

The TFL series LED Frame Light combines a modern design with outstanding lighting performance. It's great as a replacement for traditional troffers or LED panels.

Application Sites

With its uniformity and reduced glare, the LED Frame Light is ideal for healthcare facilities, retail buildings, and schools.

Benefits

The LED Frame Light comes with high-quality LED chips that provide high-efficiency, heat dissipation, stability, and lumen maintenance. Its ultra-thin design fits into virtually any space without disrupting the existing decor.

Features

- Remote mount driver
- 1-10V dimming
- Lens delivers unique beam angle and reduces glare
- Super lightweight construction means easy installation
- High-quality LED chips
- Rubber grommet included on low voltage cord

Accessories

- 6FT-Low Voltage Extension Cord | TFL-EXT-6FT
- T-Bar Mounting Bracket | TBAR-BRKT

EMERGENCY BACKUP DRIVER

for the CTAMUFO Series

The emergency LED driver contains a control/monitor circuit, which will perform a **30-second discharge test once a month and a fully discharge test once a year**. At this time, the unit simulates an AC power failure and automatically switches to emergency mode. During routine testing, the unit will monitor the operation of the LED load, battery voltage, and emergency duration. **If the unit detects any problems, the indicator will flash quickly.**

Features

- UL Listed for US and CANADA
- Listed to UL924 and tested to CSA C22.2 NO.141 Field or factory installation
- High-output voltage
- Low energy consumption CEC Title20 compliance
- Constant output power
- Self-testing
- Battery: over temperature protection

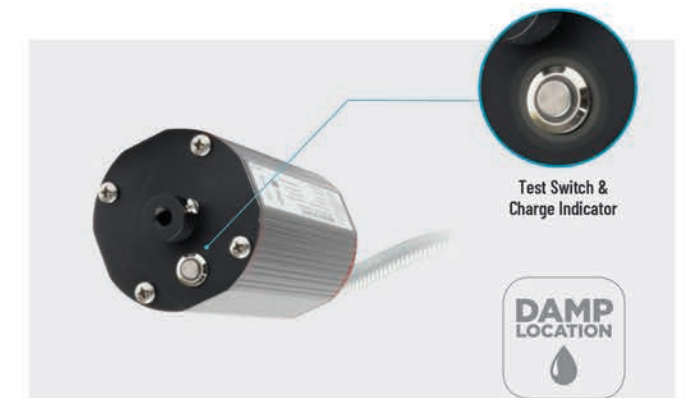

Models

Emergency Power: 25W
CTAMUFO100-150EM

Used for the CTAMUFO100W850 and CTAMUFO150W850

Emergency Power: 40W
CTAMUFO200-240EM

Used with the CTAMUFO200W850 and CTAMUFO240W850

Test Switch & Charge Indicator

Indicator Light

- Normal AC Operation, indicator light will stay on
- Emergency Operation, indicator light will flash slowly (light on for 2 seconds, light off for 2 seconds)
- In a failure, indicator light will flash quickly (light on for 0.2 seconds, light off for 0.2 seconds)

Test Switch

- In normal AC operation, press the test switch once to enter emergency mode for 30 seconds.
- In normal AC operation, press the test switch within 2 seconds to enter and remain in emergency mode until the battery is fully discharged.
- While in emergency operation, press the test switch once to return back to normal AC operation.

INTRODUCING TAHLED SERIES

The TAHLED series high bay is a high-temp, high-output aluminum high bay with premium features and BAA compliance.

EXAMPLE: TAHLED2-130D1L840

SERIES	SIZE & LUMEN OUTPUT	CRI	COLOR TEMP	FINISH
[TAHLED2] - 2ft	[-130D1]: 13,000Lm [-200D2]: 20,000Lm [-240D2]: 24,000Lm	[L8]: CRI+/-85	[40]: 4000K [50]: 5000K	[Blank]: White [BK]: Black* [GY]: Grey* [CC]: Custom Color*
[TAHLED4] - 4ft	[-130D1]: 13,000Lm [-200D2]: 20,000Lm [-360D2]: 36,000Lm

LC-WL SERIES WIRELESS LIGHTING CONTROLS

Your wireless lighting solution is here! Bluetooth lighting controls - when paired with LED technology, provides maximum energy savings potential. Control multiple lighting applications with your mobile phone. Scan the QR code to download the App today!

- Daylight Harvesting** - Automatically dim lights when enough daylight is present. This can save 10% to 60% percent in electricity costs.
- Time Clock Scheduling** - Automatically dim or turn lights off at select times of the day. Reduce electricity costs by 10% to 35% by ensuring lights are not wasting energy when they are not needed.
- High-End Trim** - All spaces do not need the full brightness of their light fixtures. For example, the human eye notices only a small difference between 100% and 80% brightness, and the electricity usage and cost can be reduced by 20% or more.
- Occupancy Sensing** - Occupancy sensors automatically turn off or dim due to the lack of movement in a space. Bluetooth wireless technology allows sensors to be installed in minutes with no additional wiring. These are also ideal solutions for retrofit applications. Sensors can reduce lighting/ electricity use from 15% to 60%.
- Personal Control** - This allows individuals to control the full range of light dimming directly over their workstations. This often results in energy savings of 10% or more while improving productivity, reducing eye strain, and computer glare.

Farland Corp.

Bedford, Massachusetts

Bedford, MA City Electric Supply recently worked with the Farland Corp. to update its office space lighting to create a more inviting atmosphere.

CES District manager Jeremy Higgins worked with the Farland Corp. to understand their vision and goals for the space to ensure the right fixtures were chosen. After speaking with CES VP of Operations, Jaime Marujo, Higgins chose to present a custom option similar to a layout at TAMCO Group's corporate office.

"Jaime had just come back from a tour of the facility and saw how they did the layout and the crisscross patterns," said Higgins. "The Farland team loved the look, and we immediately went to work with TamLite Lighting to create the perfect lighting layout."

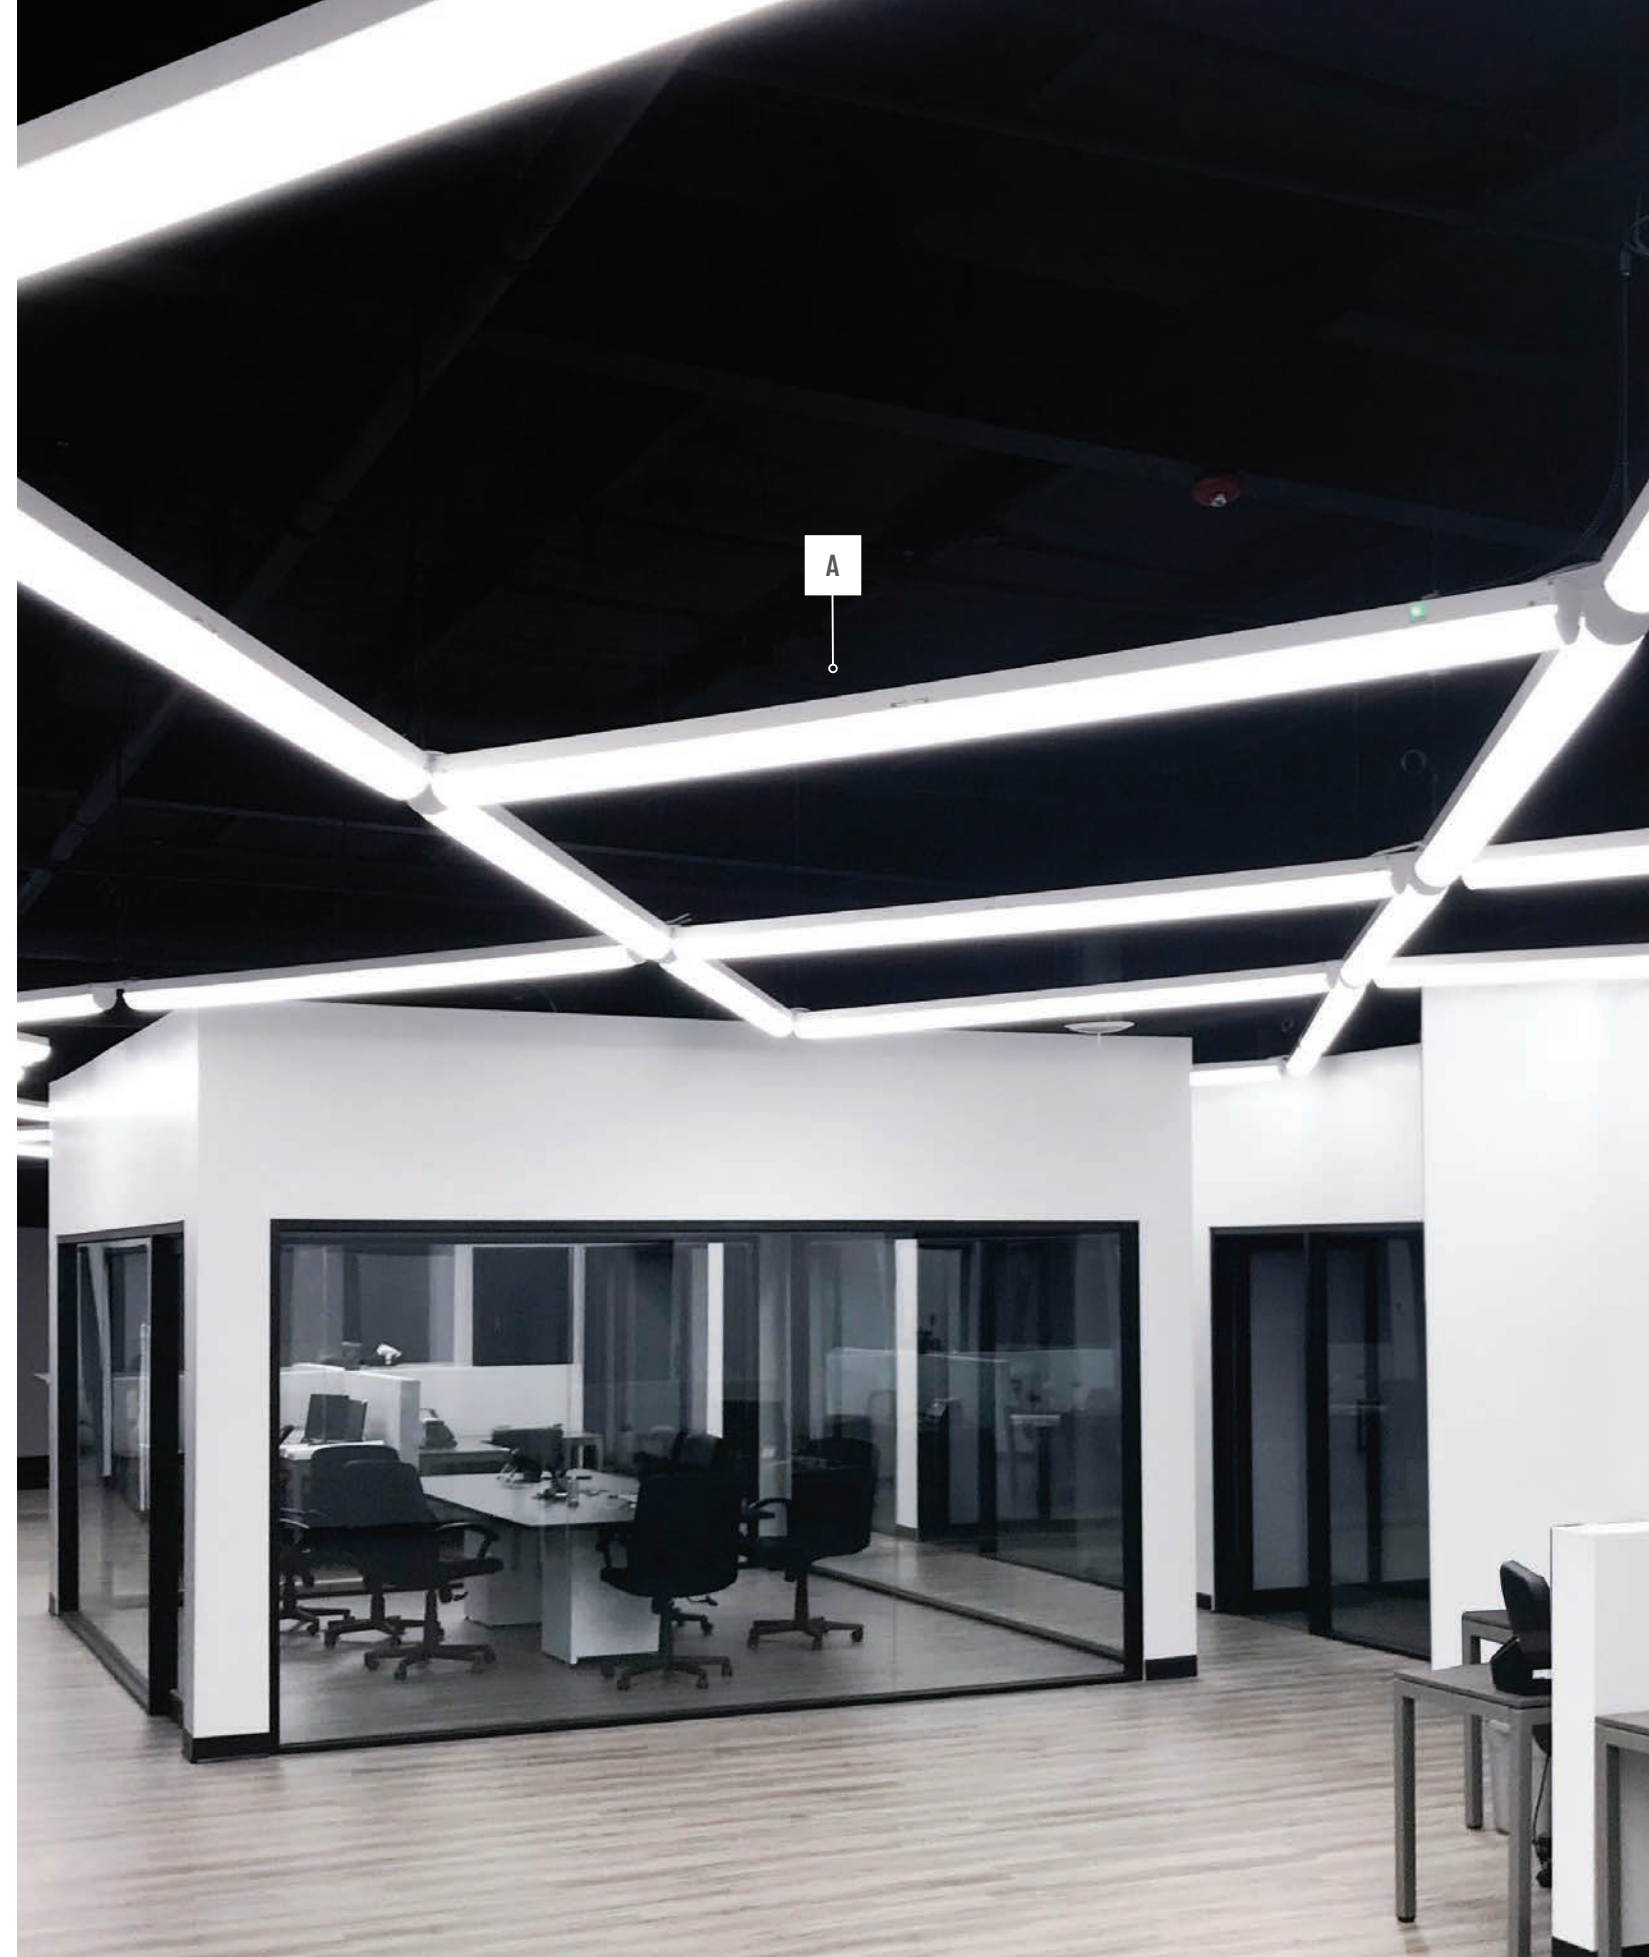

Higgins went on to share that TamLite was dedicated to the project and showed meticulous attention to detail every step of the way.

"I think what people might not know about TamLite is that they have the ability to do custom stuff like this," said Higgins. "Outside vendors usually have a catalog, that's it. TamLite customized everything we needed down to the tiniest measurements."

From quote to finish, and with everything customized, the entire project took two months, and it turned out beautifully. Today, the new Farland Corp. facility is viewed as an example of the great work other potential clients can get when they work with CES and TamLite Lighting.

TamLite Lighting fixtures bring more than light to the environment; they enhance the architectural design and bring ambiance to the most simplistic space.

Regal Automotive Group

Lakeland, Florida

Established in 1976 by Sal Campisi, Sr., Regal Automotive Group of Lakeland, FL, operates two well-known automotive dealerships, Regal Chevrolet and Regal Kia, where they sell Chevy, GMC, Honda, Acura, and Kia.

In today's competitive automotive market, lot lighting can have a significant impact on a customer's buying decision. This means the company's choice to upgrade both dealership lots from HID to LED lighting would directly impact its bottom line.

Lewman Electric, an electrical contractor and longtime customer of the CES Lakeland branch, worked with Branch Manager Bob Davis to create a customized lighting package to ensure the client's needs were met. "Lewman Electric has been a customer for nine years, over which time we provided products for hundreds of jobs. The TamLite Lighting flood made the most sense for this project," said Davis. "We are thrilled that Mr. Campisi is happy with the lighting products."

This project utilized the LPFLED in 230W 5K and 300W 5K from TamLite Lighting. This lighting configuration accentuated the color and features of the vehicles, reduced uneven lighting across the lot, and offered enhanced security. The LED technology of the lighting not only improved the parking lot, but its energy efficiency and longevity will save Regal Automotive more money in the long run.

"We absolutely love the results of the upgrade and look forward to outfitting more dealerships in the future," said Campisi, Sr.

Wishing Well Children's Clinic

Katy, Texas

The Wishing Well Children's Clinic located in Katy, TX, was designed to be a welcoming, fun, and bright environment that would put children and their parents at ease. To achieve this, J.A. Greene Construction understood that proper lighting was imperative. The desired light would need to complement the design by mimicking natural light in the appropriate spaces while providing optimal light for visibility and safety.

"The LED lighting for this project was especially important for three main reasons: the high ceilings called for proper foot candles as small children would be running around; exam rooms needed to be brightly lit for proper examinations; and, most importantly, the hand-painted murals on walls throughout the practice needed to be properly illuminated, as the characters represented provided the doctor with the inspiration needed to open her practice," said Jonathan Greene J.A., President of J.A. Greene Construction.

"At Wishing Well Children's Clinic, you could say the lighting was paramount, and TamLite Lighting was the clear solution."
